

# Bringing it together, NOW

## Connecting technologies and people, daily.

AppFusions solves complex yet common mixed-technology integration problems with packaged solutions and services.

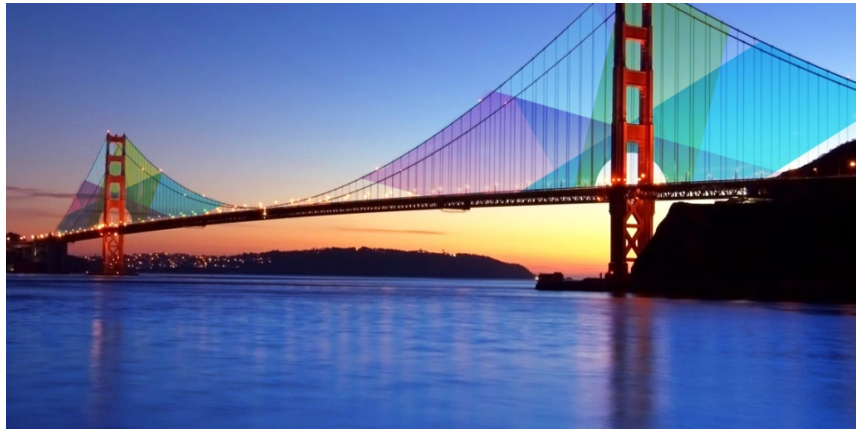

## Bridging systems, technologies, people, silos - seamlessly.

In an ideal world, logical enterprise system-to-system integrations should **just work** – securely, seamlessly, functionally, and with delightful natively integrated user experiences. But they don't.

**This is where AppFusions comes in.**

AppFusions enables, optimizes, and grows system-to-system communications and collaborations.

Our solutions ***put the end-customer and their valuable time, first*** while also minding the tricky technology integrations part too! We integrate dozens of platforms, both in the cloud and on-premise.

- IBM Connections (cloud or on-premise)
- Microsoft Office 365, OneDrive, SharePoint, Yammer...
- Salesforce
- Box
- Google Drive, Google Analytics
- Dropbox
- GitHub
- New Relic
- Twitter
- Egnyte
- Zendesk
- Alfresco
- Asana
- Atlassian systems (JIRA, Confluence...)
- WordPress
- Lingotek (translations)
- Mixpanel
- UserVoice
- Doxygen
- Authentication and SSO (single sign-on) technologies like Kerberos, SAML2, Google, CAS, OAuth2
- **and many more...**

## Achieving mutual success results, value, and process getting there

*"AppFusions provides the only feasible way to connect Google Apps (Authentication & Drive) with Atlassian server products with excellent support."*

~ Andrés Manso, Incubio's Founder

*"AppFusions was a highly capable and dedicated integration partner. Our SSO project went extremely smoothly and their knowledge of the Atlassian product suite was impressive. We had a unique situation, in that our requirements included SSO to multiple apps against a non-publicly accessible LDAP endpoint, and*
