Atlassian JIRA® in IBM Connections®

Packaged ready to deploy integration

Supports IBM Connections cloud and on-premise v5.5+

[\[Overview \]](#) [\[Features \]](#) [\[Video \]](#)

Overview

Atlassian JIRA is development and project management issue and task tracker, for managing software development projects.

IBM Connections is a leading enterprise social software platform that helps people engage with networks of expertise in the context of critical business processes.

Atlassian JIRA in IBM Connections allows IBM Connections users to search, access, preview, comment, create target lists and track analytics against JIRA cases, directly from IBM Connections.

Features

The following features are natively made available.

- Natively authenticate, access and use JIRA, from IBM Connections
- Support integration with multiple JIRA instances
- Search (separate community app)
 - Basic search with keywords (selectable)
 - Advanced search using JIRA Query Language (JQL)
 - Results filters and sorts
 - Show/hide results column
 - Back-link to JIRA cases
 - JIRA Issue details preview within the JIRA Search and JIRA List apps
- Configurable JIRA List (separate community app)
- Configurable JIRA Chart (separate community app)
- Create JIRA issue from IBM Connections
- Dynamic form that updates per Create JIRA screen changes in JIRA
- Edit, transition and comment to JIRA cases
- JIRA Agile Board (separate full page community app)
- Roadmap:
 - Display recently viewed JIRA items within IBM Connections
 - JIRA-links back to IBM Connections community (optional)
 - Insert live JIRA links (via JIRA lookup) inside IBM Connections Wiki page

Supported, sustained, packaged integration with continued roadmap feature development. Your enablement key supports all updates throughout the year.
