The banner features a light gray background with a subtle geometric pattern. On the left, the text 'Doxygen™ for Atlassian Confluence®' is written in a large, bold, orange font. Below this, the tagline 'Your project javadoc ready to review, inside Confluence.' is displayed in a smaller, gray font. In the bottom left corner, the AppFusions logo is visible. On the right side, there is a white rectangular box containing the Doxygen logo (the word 'Doxygen' in a stylized, underlined font) and the Confluence logo (the word 'Confluence' with a blue 'X' icon). A horizontal bar with orange and green segments is positioned at the bottom of the white box.

## What is Doxygen?

*"Doxygen is a popular documentation generator and tool for writing software reference documentation. The documentation is written within code, and is thus relatively easy to keep up to date. Doxygen can cross reference documentation and code, so that the reader of a document can easily refer to the actual code.*

*Doxygen supports multiple programming languages, in particular C++, C, C#, Objective-C, Java, Perl, Python, IDL, VHDL, Fortran and PHP. Doxygen is free software, released under the terms of the GNU General Public License."*

## What does Doxygen in Confluence do?

With Doxygen in Confluence, you can embed full-structure code documentation:

- Doxygen blueprint in Confluence to allow Doxygen archive imports
- Display documentation from annotated sources such as Java (i.e., JavaDoc), C++, Objective-C, C#, C, PHP, Python, IDL (Corba, Microsoft, and UNO/OpenOffice flavors), Fortran, VHDL, Tcl, D in Confluence.
- Navigation supports code structure (classes, hierarchies, files), element dependencies, inheritance and collaboration diagrams.
- Search documentation from within Confluence
- Restrict access to who can see/add what
- [Doxygen in JIRA](#) also available
